Methodology

*These are some of the topline findings of a **DART & maru/Blue Voice Canada** conducted as part of a regular sounding of Canadians on various issues and matters that affect their lives as citizens, consumers, and voters. The research is created and analyzed under the direction of veteran pollster John Wright, who is a Partner of **DART C-Suite Communicators**. Data was collected by Canada's national survey sample research provider **maru/Blue** using their **Voice Canada** Omni Online curated panel.*

*The survey was conducted among 1,511 randomly selected Canadian adults who are members of **maru/Blue's** Online panel on February 24, 2020. Respondents could opt in for either official language. The results have been weighted by education, age, gender, and region to match the population, according to Census data. This is to ensure the sample is representative of the entire adult population of Canada. Reporting of*

results from Prince Edward Island, Nunavut and both the Yukon and Northwest Territories is excluded because of extremely small sample sizes. Discrepancies in or between totals are due to rounding. Voter intent is weighted by past vote and demographics.

The precision of this **DART & maru/Blue Voice Canada Poll** is measured using a Bayesian Credibility Interval. In this case, the poll is accurate to within +/- 2.9 %age points, 19 times out of 20, had all Canadian adults been polled. The credibility interval will be wider among subsets of the population and individual provinces.
